<b>Bugzilla link:</b>	<b>Red Hat JIRA:</b>
<b>Pull request:</b>	
<b>Description</b>	
When I try to change the architecture of an existing host I get a "Couldn't find Host with ID host.domain.tld" error.	
In the Webinterface it says: "The page you were looking for doesn't exist."	
The method "ajax_methods" in the HostController tries to find the host by id, but uses the hostname, so we need a Host.find_by_name(...)	

#### History

##### #1 - 02/25/2011 04:49 AM - Ohad Levy

- Assignee set to Ohad Levy
- Priority changed from High to Normal
- Target version set to 0.2

You are correct, this was already fixed in the new css branch, but wasnt merged into the developed branch yet.  
(<https://github.com/ohadlevy/foreman/commit/10c5720bbf36e1b0f0fe09ddf43a8f59824ec8a6#diff-0>)

hopefully the new-css branch would be ready in a few days (lacking the proper redesign for the host new/edit page).

thank you.

##### #2 - 03/15/2011 03:30 AM - Ohad Levy

- Status changed from New to Closed

fixed as part of the bulk updates to the new look and feel.
