Description

Implement a way to export/import host groups and their associated puppet modules.

Or ideally allow a slave foreman host sync from the master all settings etc....

TIA,

IMHO, that is possible today with a "simple" script, (using rails console or via the api).

I'll try to see if I can provide some simple example, in the meanwhile, you might want to follow up on the mailing list, as this has been done before by others.

Hello,

You can have a look at hammer and tell us if it feets your needs for hostgroup import/export?
IMHO, Foreman Synchronisation can be achieved by clustering apache + database. Ping me if you need more infos regarding that.

Regards,

Benjamin Papillon
