

Foreman - Feature #697

The "build" link creates a symlink but should create a real files corresponding to the pxelinux file for the host

Description

When I click on the build button i see a symlink named with the client mac_address, but i could be interesting to create a file that match the pxelinux template selected for the host (if configured), wich is used by the TFTP server at the node boot.

History

#1 - 03/01/2011 02:13 PM - Ohad Levy

- Status changed from New to Closed

this is already fixed in the latest developed version.

You are more than welcome to try it out and provide feedback :)

#2 - 03/15/2011 02:51 PM - Arnaud Sourieux

Now i only work with the git develop version
but if the host was already registered with foreman it continue to create a symlink,
for the new hosts it creates a real file
