<b>Pull request:</b>	
<b>Description</b>	
<p>It must be possible for users to submit unnested POST requests and get the object created. However some (all?) API/v2 controllers beg to differ.</p> <p>This can be replicated for all properties of <code>api/v2/interfaces</code>, <code>api/v2/external_usergroups</code>, and possibly other controllers.</p> <pre>curl -X POST -u dlobatog:xxxx -H "Content-Type:application/json" http://localhost:3000/api/v2/hosts/19236/interfaces -d '{"domain_id":13232}'</pre> <pre>{   "error": {"message": "domain_id is not allowed as nested parameter for interfaces. Allowed parameters are host_id"} }</pre>
