Pull request:			

Description

When I change the MAC-address of a machine that is marked as "Build",
then foreman should remove an existing link with the old mac-address from the TFTP-Server and create a new one.

Revision 5942416f - 03/09/2011 05:37 AM - Ohad Levy

fixes #702 - remove pxe-config-link when changing the mac address

this also ensures that the legacy TFTP system won't be called once a smart proxy is in use.

History

#1 - 03/02/2011 08:15 AM - Ohad Levy

Alex,

Which version of foreman are you using? afaik, the latest git develop branch already does that (assuming you are using the smart proxy to configure tftp).

#2 - 03/03/2011 04:22 AM - Alexander Rusa

I pulled the latest version now and there were some updates for foreman and smart-proxy, but the behavior is still reproducible.

1. I set an existing machine to "Build"
2. The symlink /tftpboot/pxelinux.cfg/<mac>gets created
3. I change the MAC address of the Host
4. The symlink does not change.

If I now click "Cancel Build" and "Build" I have symlinks for both MAC addresses.

- Category set to TFTP

- Assignee set to Ohad Levy

- Target version set to 0.2

You are correct - however :)

we left the old tftp behavior in place not to break anyones current foreman deployment.

the new way of managing tftp services is using a smart proxy, which would also remove the entry.

I agree we can fix the legacy setup as well - thanks.
