Foreman - Bug #7028

association of subnet, domain, templates and resources to organization has no effect via CLI

08/11/2014 03:50 PM - Bryan Kearney

Status:	Closed		
Priority:	Normal		
Assignee:	Tomáš Strachota		
Category:	API		
Target version:	1.6.0		
Difficulty:		**Fixed in Releases:**	
Triaged:		**Found in Releases:**	
Bugzilla link:	1128664	**Red Hat JIRA:**	
Pull request:	https://github.com/Katello/katello/pull/4603		

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1128664
Description of problem:

association of subnet, domain, templates and resources to organization has no effect via CLI.

Looks like there is no error message even via verbose and also in /var/log/foreman/production.log

a) resources

hammer -u admin -p changeme -v organization add-compute-resource --id=1 --compute-resource-id=$COMPUTERESOURCEID

b) subnet
hammer -u admin -p changeme -v organization add-subnet --id=1 --subnet-id=$SUBNETID

c) domain
hammer -u admin -p changeme -v organization add-domain --id=1 --domain-id=$DOMAINID

d) template
hammer -u admin -p changeme -v organization add-config-template --id=1 --config-template-id=$id

Version-Release number of selected component (if applicable):
sat6-GA-snap4

How reproducible:

Steps to Reproduce:
1.
2.
3.

Actual results:
Association of subnet, domain, templates and resources seem to fail

Expected results:
Association of the above said entites must be successful.

History

#1 - 08/12/2014 03:44 AM - Dominic Cleal

- Project changed from Foreman to Hammer CLI

- Category set to 74

Seems to be working for me on Foreman - from foreman-debug:

Processing by Katello::Api::V2::OrganizationsController#update as application/json;version=2
Parameters: {"domain_ids"=>["2"], "api_version"=>"v2", "id"=>"1", "organization"=>{}}

On my system:

Started PUT "/api/organizations/1" for 127.0.0.1 at 2014-08-12 08:40:16 +0100
Processing by Api::V2::OrganizationsController#update as JSON
Parameters: {"organization"=>{"domain_ids"=>["1"]}, "apiv"=>"v2", "id"=>"1"}

Maybe the lack of nesting of domain_ids is causing a problem (that's CLI side for me).

#6 - 08/22/2014 08:20 AM - Tomáš Strachota

This turned out to be a complicated one. CLI builds the action params according to the api documentation which was partially missing for Katello's organization controller due to it inherits from Foreman's one. Apipie has limited means of docs inheritance. After discussion with inecas I decided to solve it by using param groups. Unfortunately there's a bug in apipie in renaming concern params (used by taxonomies).

Proper fix requires patches to all apipie, foreman and katello. 3 PRs will follow.
