| <b>Description</b>  |                           |
| <p>Hi,<br/>i would like to configure mon pxelinux and preseed file<br/>with parameters such as ip and other stuff<br/>but when i try to buil the host i have an error saying that @host doesn't have an ip propriety (as example)<br/>so i don't know how to say to my pxelinux template to wget the good pressed file<br/>because &lt;%= foreman_url("pressed")%&gt; =&gt; <a href="http://foreman_server/unattended/preseed">http://foreman_server/unattended/preseed</a><br/>and the only way i know to get the preseed file for my host is to wget <a href="http://foreman_server/unattended/preseed?spooof=\$host_ip">http://foreman_server/unattended/preseed?spooof=\$host_ip</a><br/>and i tried to do : <a href="http://foreman_server/template/\$preseed_template/\$domain">http://foreman_server/template/\$preseed_template/\$domain</a><br/>but this i can't use anymore the host properties<br/>is there another way??</p> <p>thank you</p> |                           |

Sorry, I guessed I missed this ticket - mailing would be a better target next time :)

normally, it should be possible to use @host.ip (if ip was defined)

can you provide some examples of what you are trying to achieve?

##### #2 - 03/15/2011 02:44 PM - Arnaud Sourieux

In my PXELinux template i would like to do :  
url=<%= foreman\_url("pressed")%>?spooof<%= @host.ip %>  
to do the preseed install with properties registered for my host  
but when i click on "build" it says that the @host doesn't have a ip property  
all my hosts have an ip set.

Hello,

Did you managed to do what you wanted? Does foreman works fine for you now?

Regards
