Katello - Bug #7091

issues with associating a content host with host collection(s)

08/14/2014 11:30 AM - Walden Raines

Status: Closed
Priority: Normal

Assignee: Walden Raines

Category: API

Target version: Katello 2.0

Difficulty: easy Fixed in Releases:

Triaged: Yes Found in Releases:

Bugzilla link: 1129375 Red Hat JIRA:

Pull request: https://github.com/Katello/katello/pull/459

4

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1129375

Description of problem:

I'm unable to associate a content host with a host collection via API - POST won't make the association, PUT does not expect appropriate parameter

Version-Release number of selected component (if applicable):

Satellite-6.0.4-RHEL-6-20140806.0-Satellite-x86_64 + applied https://github.com/Katello/pull/4508

How reproducible:

always

Steps to Reproduce:

1. create host collection:

curl -s -H "Content-Type:application/json" -H "Accept:application/json,version=2" -k -u admin:changeme -d '{"organization_id":1, "name":"group1"}' \$(hostname)/katello/api/host collections

{"created_at":"2014-08-12T14:51:15Z","updated_at":"2014-08-12T14:51:15Z","name":"group1","organization_id":1,"max_content_hosts":null,"description":null,"total_content_hosts":0,"unlimited_content_hosts":true,"system_ids":[],"id":4,"permissions":{"deletable":true, "editable":true}}

2. try to register a content host associated with the host collection:

curl -s -H "Content-Type:application/json" -H "Accept:application/json,version=2" -k -u admin:changeme -d '{"type":"system", "facts":{"release":"6Server", "architecture":"x86_64"}, "host_colletion_id":"4", "organization_id":1, "description":"not relevant", "name":"mysystem-123.example.com"}' \$(hostname)/katello/api/systems

{"id":7,"uuid":"9c507ad1-482f-47bc-8ddd-aaf196e836dd","name":"mysystem-123.example.com","description":"not relevant","location":"None","content_view":{"id":1,"name":"Default Organization

View","label":"Default_Organization_View","description":null,"organization_id":1,"default":true,"created_at":"2014-08-08T15:11:41Z"," updated_at":"2014-08-08T15:11:41Z","composite":null,"next_version":1,"organization":"Default_Organization","environments":["Librar y"],"versions":[1],"versions_details":[{"version":1,"published":"2014-08-08 15:11:41

UTC","environments":["Library"]}]},"content view id":1,"distribution":"

","content_overrides":[],"entitlementStatus":"valid","autoheal":true,"href":"/consumers/9c507ad1-482f-47bc-8ddd-aaf196e836dd","rele ase":null,"checkin_time":null,"created":"2014-08-12T14:57:19.092+0000","installedProducts":[],"service_level":"","release_ver":null,"permissions":{"editable":true},"products":[],"host":null,"hostCollections":[],"customInfo":[],"environment":{"id":1,"name":"Library","label":"Library","description":null,"organization":{"name":"Default_Organization","label":"Default_Organization"},"created_at":"2014-08-08T15:11:39Z","updated_at":"2014-08-08T15:11:39Z","library":true,"prior":null,"permissions":{"view_lifecycle_environments":true,"edit_lifecycle_environments":true,"destroy_lifecycle_environments":true,"promote_or_remove_content_views_to_environments":true}},"activation_keys":[]}

Actual results:

- 1) content host wasn't associated with the host collection ("hostCollections":[])
- it isn't associated, even if I pass host_collection_id as integer or as an array as I would expect
- 2) apidoc/v2/systems/create says the value of "host collection id" is "Value: String"
- 3) "host collection id" is missing among the /apidoc/v2/systems/update parameters

Expected results:

- 1) content host created with host collection association
- 2) expect an array (not a string) for the host collection id parameter, as a content host may be associated with multiple host

05/17/2024 1/2

collections

3) content host update shall make it possible to update host collection association

Additional info:

transition tooling is dependent on these APIs

Associated revisions

Revision a239724d - 08/20/2014 12:43 PM - Walden Raines

Fixes #7091/BZ1129375: fix documentation for create/update system.

The params documentation for create and update system was incorrect.

This commit fixes the documentation.

This JSON is incorrect. It should be "host_collection_ids":[2] not "host_collection_id":"4" (not the misspelling and the string instead of an array).
