Smart Proxy - Bug #716

Init script for rpm starts as foreman-proxy user, but that user has no write permission

[FAILED]
[root@jweiss-foreman-1 smart-proxy]# rpm -q foreman-proxy
foreman-proxy-0.1-rc1.noarch

_____

I think the fix might be to have it run as root (change the default FOREMAN_PROXY_USER to root in /etc/sysconfig/foreman-proxy). Alternative is that the rpm should create the foreman-proxy user with a HOME dir he can write to. Currently that is /usr/share/foreman-proxy and it is owned by root.
