Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1040112

There are various places in the katello-disconnected codebase that do not properly include configuration options to support running behind an http proxy.

This means that anyone using katello-disconnected to sync and setup content will not be able to utilize the tool until this bug is resolved.

We need the following:

1) Configuration options for the 'katello-disconnected setup' command. It will need:

```
1. katello-disconnected setup --help
   Usage: setup [--option VALUE]
   --host PULP_HOSTNAME      Pulp host (default "localhost")
   ...
   --proxy-url=PROXY_URL
   --proxy-port=PROXY_PORT
   --proxy-user=PROXY_USER
   HTTP Proxy user (proxy username, if auth is required)
   --proxy-pass=PROXY_PASS
   HTTP Proxy pass (proxy password, if auth is required)
```

2) Update any network access calls to pass in the configuration options

History

#1 - 08/25/2014 02:29 PM - Eric Helms

- Target version set to 55
- Difficulty set to easy
- Triaged changed from No to Yes

#2 - 09/08/2014 08:14 AM - Eric Helms
