Katello - Bug #7273

When publishing/promoting CV, while capsule exists, content gets synced twice to capsule

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1134100
Description of problem:
When a user has capsule(s) attached to an instance, and attempts to publish/promote content, said content is synced twice to capsule -- once during the initial publish process and then again afterwards.

Version-Release number of selected component (if applicable):
Satellite-6.0.4-RHEL-6-20140823.0

How reproducible:

Steps to Reproduce:
1. Attach a capsule to your sat
2. Create a content view and attempt to publish/promote it.
3. Note dynflow tasks and/or possibly just talk w/ a knowledgeable developer who understands what the heck is going on (jsherrill!)

Actual results:
Apparently, this is the situation.

- Previously, as part of a publish, new content was immediately pushed out to capsules as part of that publish
- There was discussion to break this into two tasks - do initial pub/promote to library and spawn a second task to sync.
- I am not sure whether a real decision was made on the behavior in the bullet above, but whatever the case, we're apparently still doing a sync during the initial publish -- followed by a second sync immediately after.

Expected results:

Apparently there was a lot of discussion between dev on how to handle the sync, whether to keep it as one big monolithic function (promote/publish/capsule sync) or break it out (promote/pub THEN content sync). As an end user I think the second behavior is more palatable because otherwise user is sitting there on a publish that takes ages and user has no idea why. Regardless, we shouldn't be syncing twice, independent of workflow decision.

Revision b50dc0e4 - 08/27/2014 01:28 PM - Justin Sherrill

fixes #7273 - sync puppet and rpm content together

previously there was a task spawned to sync rpm content to the capsule
when puppet content sync to the capsule was added, it was not added in
this 2nd task. This commit moves puppet syncing to that 2nd, spanwed task.
