Description

If a host is not managed by foreman,
we are unable to set his Name, Hostgroup or Environment.
When I try to set and submit them i get an error saying :
- Mac can't be blank
- Mac is invalid
- Ip is invalid

but as it his an unmanaged host we can't (maybe won't) set them

not sure i understand... if the host is managed you need to key in mac/ip etc, if its not, you are not required....
