

Foreman - Bug #744

Preseed <%= root_pass %>

03/15/2011 03:09 PM - Arnaud Sourieux

Status: Duplicate	
Priority: Normal	
Assignee: Ohad Levy	
Category: Unattended installations	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description The value of the <%= root_pass %> var isn't allways the same when i try to access my template from : /unattended/template/\$template_name/\$hostgroup the root_pass value appears non crypted but when i acces it from : /unattended/provision?spoof=\$host_ip : the root value is crypted so the preseed file could be wrong in some cases because on debian preseed there a 2 ways to set the root_pass, crypted or not but the value to set with the root_pass isn't the same depending on the fact that the root_pass is crypted or not
