

Foreman - Bug #75

appends hostname to existing item in autosign.conf

Description	
I've noticed on a few occasions that foreman will append the hostname to an existing host/wildcard in the autosign.conf file.

what do you mean? the same host name twice?

can you give some examples?

#2 - 11/10/2009 09:16 AM - Matt Moran

If I have a autosign.conf that already contains hosts i.e:

```
.test1a.local
```

```
.test1b.local
```

I've noticed that foreman will append a hostname on to the last line instead of creating a new line. i.e. if building a host host1.test1c.local then the autosign will look like

```
.test1a.local
```

```
.test1b.localhost1.test1c.local
```

I've noticed that adding a couple of blank lines below the existing hosts mitigates the issue.

I cant reproduce this..... could it be that you didnt add an EOL (end of line) when you added another host?

#4 - 11/16/2009 09:07 AM - Matt Moran

Could be, though foreman should look for a new empty line before appending the host IMHO.
