Revision 5821a269 - 03/17/2011 03:39 AM - Mark Bainter

fixes #752 - Lookup the constant for the log level

As written, the Logger::WARN is just a string, causing a crash when comparing FIXNUM to String types. Switched to using get_const. Note that this requires changing the settings.yml file to use just the constant name, :log_level: WARN instead of Logger::WARN

Updating config example to reflect log change
