Team Backlog:			

Description

Hammer is missing functionality around config groups, which were introduced in Foreman 1.5.

It should be able to:

1. perform CRUD operations on config groups themselves: http://theforeman.org/api/apidoc/v2/config_groups.html
2. manage associations between config groups and Puppet classes (outside of Puppet environments)
3. manage associations between hosts and config groups
4. manage associations between host groups and config groups
