*- File production.log added*

We have some problem which might need your help when we use the foreman discovery , and it is listed below:

The operating environment:

Foreman version 1.6.0

Foreman-proxy version 1.6.0

Foreman discovery version 1.3.0

Ovirt image version 0.5.0-1

Ruby version 1.9.3p484

When we boot a server from PEX and load it to discovery image, then find it in discovery hosts in foreman web page, dhcp records already exists after we summit all these. The following error comes out after we click ack and then overwrite.

undefined method `boot_filename' for nil:NilClass

If you feel this is an error with Foreman itself, please open a new issue with Foreman ticketing system, You would probably need to attach the Full trace and relevant log entries.
