

## Foreman - Bug #789

### puppetmaster is no longer correct in Host#info after #765

<b>Description</b>	
The info method returns the puppetmaster, which may be a SmartProxy reference. This cannot be directly interpolated into the external node config. This method should also truncate "puppet.a.b.com" to "puppet"

I hope that I have not missed something here. This does look like the best way to go if the proxies are of the form <https://puppet.a.b.c:1234> for hosts. However it is not so clear whether this is right for the hostgroup page
