Description	
<p>After doing an upgrade via apt-get foreman would crash when looking at facts because it could no longer find foreman_chef.</p> <p>I re-added " gem 'foreman_chef' " to the Gemfile and ran bundle install to resolve the issue.</p> <p>Trace from the crash: ActiveRecord::SubclassNotFound The single-table inheritance mechanism failed to locate the subclass: 'ForemanChef::FactName'. This error is raised because the column 'type' is reserved for storing the class in case of inheritance. Please rename this column if you didn't intend it to be used for storing the inheritance class or overwrite FactName.inheritance_column to use another column for that information. app/views/fact_values/index.html.erb:15:in `_f030b23005a345b3b0c579764b57eca4' app/models/concerns/foreman/thread_session.rb:33:in `clear_thread' lib/middleware/catch_json_parse_errors.rb:9:in `call'</p>

Use ~foreman/bundler.d/Gemfile.local.rb instead, or for that matter, any file in bundler.d/ as they're all loaded - the packages won't replace those if they're unknown. Gemfile is a packaged file, so we need to update it between releases.
