| Triaged: | Found in Releases: Nightly |
| Bugzilla link: | Red Hat JIRA: |
| Pull request: | |
| Description | |
| <p>In a new installation, the first server being built will fail when reaching the disk partition section and complain on a missing diskpart.cfg</p> <p>The solution is to add the following two lines to the partition tables: cat <<EOF > /tmp/diskpart.cfg EOF</p> <p>such that the final partition template looks like:</p> <pre>#Dynamic cat <<EOF > /tmp/diskpart.cfg zerombr clearpart --all --initlabel part /boot --fstype ext3 --size=500 --ondisk=sda part swap --size=1024 --ondisk=sda part pv.01 --size=1024 --grow --ondisk=sda volgroup vg_root pv.01 logvol / --vgname=vg_root --size=1 --grow --name=lv_root EOF</pre> | |

History

Could you please copy this to the BZ? This is not related to Foreman.

#2 - 11/10/2014 03:32 AM - Marek Hulán

- Status changed from New to Rejected

Closing since this is staypuft specific.
