

## Foreman - Feature #798

### Make possible to schedule/execute tasks via Foreman's GUI

<b>Description</b>	
It would be nice not to have to login to Foreman's machine to execute custom tasks.	
The interface could allow us to schedule and/or execute tasks as "foreman" system user such as:	
<ul style="list-style-type: none"><li>- reports:expire</li><li>- puppet:import:hosts_and_facts</li><li>- reports:summarize days...</li><li>- a custom task (non-rake) (For example: to refresh your modules from a git repository)</li><li>- etc...</li></ul>	
I thought about implementing this with something like: puppet module (exec/refreshonly) + foreman parameters + puppetrun, but it feels like an ugly workaround and I can't easily trigger the tasks individually.

## History

### #1 - 03/29/2011 05:04 PM - Marcello de Sousa

Trying to be a little more specific: my suggestion is to have a page in the UI dedicated to tasks.

Foreman could be distributed with a default sample of it's tasks (import classes, hosts, expire reports, etc) and we should be able to:

- add new custom ones
- modify the existing ones
- schedule them
- trigger them
