Foreman - Refactor #7992

SafeRender slowes down enc when parsing array parameters with many values

Description

enc calls 'value_of_key' which uses safe render parse for each smart class parameter/variable value that matches a host.
For a parameter of type array the parsing goes over each member of the array to parse them.
Arrays with many values cause a slower response for enc.
This can be avoided by adding an option to decide if a value of a smart variable should be parsed or not.
