Pull request:	
Description Right now, deleting a host does not cancel any pending builds, leaving PXE symlinks around. Smart proxies may have other cleanup required. This patch calls cancelBuild when a host is deleted.

I'm not 100% sure if this is required.

You are correct that if you are not using a smart proxy (legacy mode) this is happening. however, if you use the proxy, it would get deleted as required.

what do you think?
