

Installer - Feature #8020

puppet-server-environments should take a list of arguments

10/21/2014 10:40 PM - James Kyle

| Description | |
| <p>Currently you must specify the puppet-server-environments argument to the installer multiple times, once for each environment. For example</p> <pre>foreman-installer --puppet-server-environments environment1 --puppet-server-environments environment2</pre> <p>It would be very nice to provide a single command like so</p> <pre>foreman-installer --puppet-server-environments environment1,environment2,environment3</pre> <p>If multiple arguments are preferable, maybe make the argument singular such as</p> <pre>foreman-installer --puppet-server-environment environment1 --puppet-server-environment environment2</pre> <p>Also, the docs are a bit vague on usage. It took me a while, with some help from #theforeman, to figure it out.</p> <p>Thanks for the great platform!</p> | |

History

#1 - 10/22/2014 03:32 AM - Marek Hulán

- Project changed from *Kafo* to *Installer*

This comes from [clamp](#), an underlying library used for CLI options. We should probably document this better in foreman-installer, therefore I'm moving to Installer subproject. Also renaming the puppet parameter (which I don't prefer would be OK with that) would happen in installer modules.

#2 - 12/02/2020 05:48 PM - Ewoud Kohl van Wijngaarden

Dealing with it this way is convenient from a programmers point of view. It could use more documentation and I have also thought about renaming plural to singular, but it's a bit tricky.

I'm going to leave it open for a bit longer, but I doubt we'll get to it.
