

Installer - Bug #8050

config_version isn't working on directory envs + git repos

10/23/2014 06:48 AM - Dominic Cleal

Status: Resolved	
Priority: Normal	
Assignee:	
Category: Foreman modules	
Target version:

Pull request:	
Description	
<p>When specifying --puppet-server-git-repo=true on a recent Puppet version that enables directory environments results in this puppet.conf setup:</p> <pre>[master] environmentpath = /etc/puppet/environments basemodulepath = /etc/puppet/environments/common:/etc/puppet/modules:/usr/share/puppet/modules config_version = git --git-dir /etc/puppet/environments/\$environment/.git describe --all --long</pre>	
<p>However using config_version here isn't valid.</p> <p>Warning: Setting config_version is deprecated in puppet.conf. See http://links.puppetlabs.com/env-settings-deprecations (at /usr/share/ruby/vendor_ruby/puppet/settings.rb:1119:in `issue_deprecation_warning')</p> <p>I can't see a way to set config_version globally any more, so we may have to generate environment.conf files. If we do, the post-receive should probably copy or generate environment.conf when setting up new environments.</p>
