

Foreman - Bug #8111

Openstack networking doesn't allow to set one DNS name per interface

10/27/2014 05:05 AM - Romain Vrignaud

Pull request:		
Description Networking for Openstack Compute Resource is only managed in virtual machine tab, it allows to add multiple network interfaces to an instance. However we can't specify the DNS name for each interface. As a user I would like to be able to add a DNS name (possibly on different domain) for each interface (and possibly the floating IP).
