

Foreman - Bug #8293

foreman-installer doesn't install the yum repo for ruby193 scl

11/05/2014 07:09 PM - Corey Osman

Status:	Rejected	
Priority:	Normal

Pull request:		
Description		
I ran the installer and yum was not able to find the ruby193 package so the installer failed. I am not sure if I missed a step in the documentation but this is something that should be documented or automated by the installer.		
I think I traced the problem to the package not being signed and the repo forces this check.		
Package rhsc1-ruby193-epel-6-x86_64-1-2.noarch.rpm is not signed

- Status changed from New to Need more information
- Target version deleted (1.7.2)

On CentOS 6? I don't think the installer will ever install that on Foreman 1.6, though it is used on CentOS 7 and has some workaround instructions in the manual (which we've fixed for 1.7). On EL6, it should install centos-release-SCL to enable the CentOS SCL repositories.

Can you perhaps step back to the original error, what was it? And check if the CentOS SCL repo got configured under /etc/yum.repos.d/

I had to ensure this was enforced in order to have the ruby installed.

```
yumrepo { 'rhsc1-ruby193-epel-6-x86_64':
  descr    => 'Ruby193 - epel-6-x86_64',
  baseurl  => 'https://www.softwarecollections.org/repos/rhsc1/ruby193/epel-6-x86_64',
  enabled  => 1,
  gpgcheck => 0,
}

yumrepo { 'rhsc1-v8314-epel-6-x86_64':
  descr    => 'V8314 - epel-6-x86_64',
  baseurl  => 'https://www.softwarecollections.org/repos/rhsc1/v8314/epel-6-x86_64',
  enabled  => 1,
  gpgcheck => 0,
}
```
