Pull request:		

Description

Foreman installer failes because it can't install foreman-postgresql

SCL repo config is in place and after aborting the installer and running yum clean all it does proceed as expected.

This is most probably a dependency issue.

```
[root@localhost ~]# foreman-installer
/Stage[main]/Foreman::Install/Package[foreman-postgresql]/ensure: change from absent to present failed: Execution of '/usr/bin/yum
-d 0 -e 0 -y install foreman-postgresql' returned 1:

```

History

#1 - 11/26/2014 08:21 AM - Dominic Cleal

My only guess as to the cause, is that some metadata already existed in /var/cache/yum for the "SCL" repository before it was added with centos-release-SCL. (Maybe it'd been configured already recently, or already existed with another baseurl?)

The module could perhaps run yum clean through a refreshonly exec, chained so it runs when foreman::install::repos/extras changes.

#2 - 11/26/2014 08:24 AM - Kris Buytaert

Deployment was twice on a fresh box where there were not SCL repos defined before the foremaninstaller started it's work.

#3 - 11/26/2014 08:31 AM - Dominic Cleal

```

#4 - 05/19/2017 09:10 AM - Anonymous

can this be closed? I think it's either solved by now or out of scope...

#5 - 10/06/2017 11:56 AM - Ewoud Kohl van Wijngaarden

- Status changed from New to Rejected

I agree this can be closed now.
