Description

While reading the release notes of the new Puppet Dashboard, I cam across this really interesting feature:

"Filebucket integration. .... Dashboard is now filebucket-aware. When the checksum of a file is mentioned in a report, Dashboard will offer to display the bucketed contents. Similarly, when a file's content changes, you will have the option to view a diff."

It would be great to see a feature like this in Foreman. Extremely handy...
It's not clear to me if it supports client side bucket, or server side only.

I'd like to revive that feature request.

We are going to implement Puppet/Foreman in our environment and that feature would be necessary for us.

Is there any development on this?

TIA

Bump!

#6 - 07/02/2012 05:12 PM - Marcello de Sousa

- Assignee set to Ohad Levy

I guess you want to assign this one to 1.1 and the proxy. But I don't have rights to do that...

#7 - 01/21/2013 07:27 AM - Ohad Levy

- Subject changed from Make Foreman Filebucket aware, able to see bucketed file contents and diffs to display diff view on Puppet file content change

- Target version set to 1.1

Puppet now sends the diff in the report it self, not requiring the round trip to the server to fetch the filebucket.

#8 - 01/21/2013 07:54 AM - Amos Benari

- Status changed from New to Closed

- % Done changed from 0 to 100
