<b>Description</b>	
<p>There are a smattering of oddly categorized settings in Administer <del>&gt; Settings</del>— this is my recommendation for a reorder. Not a demand by any means.</p> <p>SSL cert settings are buried in a strange place, under provisioning, where a Communications menu or the Auth menu would make more sense.</p> <p>FROM "Provisioning" TO "Auth" or "Communications":</p> <ul style="list-style-type: none"><li>ssl_ca_file</li><li>ssl_certificate</li><li>ssl_priv_key</li><li>websockets_encrypt</li><li>websockets_ssl_cert</li><li>websockets_ssl_key</li></ul> <p>This one is just kind of a bonus.</p> <p>FROM "General" TO "Auth":</p> <ul style="list-style-type: none"><li>authorize_login_delegation</li><li>authorize_login_delegation_api</li><li>idle_timeout (personally I think it should go with the other user settings)</li></ul>
