Description of problem: It is possible to enable build also for hosts that are not managed. The result is then a no-op, because the PXE templates are not generated.	
This behaviour is inconsistent with the UI, that where you cannot click the Build button when the host is not Managed. Also in the situation of enabling build without managed shows in the UI that the node is in Building status, but you are not allowed to view the templates either, these show an error that the host is not managed.
