

Foreman - Bug #867

updating a host to belong to a null hostgroup doesn't work

04/26/2011 02:31 AM - Corey Osman

Pull request:	
Description	
when I call http://foreman/hosts/update_multiple_hostgroup with some json code where the hostgroup_id is set to "". The api call completes but it doesn't seem to update the host. If I were to update the host through http://foreman/hosts/FQDN and pass in hostgroup_id="" the command would complete successfully and set the hostgroup to "blank" hostgroup. I also don't see a method to select a "blank" hostgroup when using the webui multiedit function either. I'll need this feature in order to unset a host from a hostgroup from my mobile app

A hostgroup id of "clear", rather than the numeric value of a hostgroup_id, is now interpreted as a request to replace the current hostgroup_id for all multiple hosts with a nil.

I have not explicitly tested the API with a json call as I am not clear as to how this differs from the web interface interaction. Are there tools to help with the testing of this?

#4 - 05/19/2011 01:34 AM - Corey Osman

I'll take a look at it and test it out.

#5 - 05/24/2011 01:14 PM - Corey Osman

Just tested and it works very well. I wasn't able to test the environment portion but I am now able to set the hostgroup to "".
