Description

I've started to install Foreman via *sudo apt-get install foreman-pgsql*. After answering question about database password, window with title **Unknown id: postgres** arised.
Retry doesn't seem to work.

Puppet installed on the same machine.

- Target version deleted (0.3)

any chance you can try it with plain git source / nightly snapshot to see if its not related to packaging?

thanks

I could reproduce the described error.

The problem here is that the PostgreSQL server is only being configured *after* foreman-pgsql or foreman is has been installed and the appropriate hook for creating the PostgreSQL user/database has been executed.

A quick workaround is installing the package postgresql before installing foreman-pgsql.

#3 - 05/21/2011 01:02 PM - Jochen Schalanda

- Status changed from Feedback to Ready For Testing

- Target version set to 0.3

Should be fixed in latest package in our testing repository.

@Grigory, please test if the error still occurs on your system with the latest package.

#4 - 05/22/2011 04:00 AM - Jochen Schalanda

- % Done changed from 0 to 100

Applied in changeset c774ec5a6f0f184bc778baec6210770405f14ac3.
