Pull request:	
Description	
<p>The false/red "x" image that is displayed when there is an error with a report seems to be broken sometimes. It looks like something is appending a random ID to the end of the image filename:</p> <pre>9 minutes</pre> <p>This results in a 304:</p> <pre>[23/Nov/2009:22:07:54 0600] "GET /images/false.png?*1258747171 HTTP/1.1" 304 - "" Mozilla/5.0 (Windows; U; Windows NT 5.1; en-US; rv:1.9.1.5) Gecko/20091102 Firefox/3.5.5 (.NET CLR 3.5.30729)"</pre> <p>However, if I replace those numbers with something else random, the image works correctly. So, it must be something specific to the number that is being generated?</p>

the number after the image (e.g. png?*1258747171) instruct your browser to use a cached image instead of fetching it again from foreman.

this sounds like a "problem" with your browser (session/cache etc).

can you start with a fresh browser session and see if it happens again?

any feedback on this one? if not, I'll reject it.

Thanks

#3 - 12/04/2009 02:50 PM - Josh Baird

It was indeed a browser issue. Reject it!
