

Foreman - Bug #8800

Table cells should clip with tooltip only if text actually overflows

12/28/2014 11:57 AM - Tomer Brisker

Description

Clipping to ellipsis leaves a lot of white space in the column.
Also possibly resize columns to better fit contents.

Revision 027d2087 - 10/07/2015 10:58 AM - Tomer Brisker

Fixes #8800 - Clip table cells only when needed

For clipping to work, table must have class `table-fixed` and the cell have class `ellipsis`. Also column widths should be set in table head. Clipping will occur automatically with tooltip.

History

#1 - 10/06/2015 10:39 AM - Tomer Brisker

- Subject changed from *Host list table clips attributes too soon* to *Table cells should clip with tooltip only if text actually overflows*

Currently, table cells have one of two possible behaviors:

1. Clipping at a hard coded, arbitrary length - which may cause a lot of white space that could be used for displaying the entire text or part of it.
2. Overflowing causing the table layout to break.

The text should clip with tooltip only when really needed, and this should be handled by the browser and not by the server.
