<b>Description</b>	
Need api call to get back a list of reports via json so that it returns the same thing <a href="http://foreman/reports">http://foreman/reports</a> currently does.	
Will need report summary, timestamp, hosts, report id, report status.

This does not work correctly. The code below (in the patch) only returns success and never returns a summary status with failed or modified. You can reproduce this by using the following url

1. <http://puppet/reports?search=failed%3E0&format=json>
2. Use the browser search to find the summary. The summary result should be "failed" instead of "success"

```
def summarystatus
  case self
  when error?
    "Failed"
  when changes?
    "Modified"
  else
    "Success"
  end
end
```

The following code ensures the correct status will be returned.

```
def summarystatus
  if self.error?
    return "Failed"
  elsif self.changes?
    return "Modified"
  else
    return "Success"
  end
end
```
