Foreman - Feature #890

create statitistics feature where user can create custom graphs based on a fact of choice

Description

I would like to see a feature where I can do the following:

1. Click on any fact and graph it based on the fact value.

2. The graph should probably be a pie chart.

The data returned should be something like the following:

```
{stats: {factname: rubyversion, values: {1.8.7: 10, 1.9.1: 3, 1.8.1: 6, 1.8.5: 33}}
```

this example says:

factname is rubyversion
The values that facter return and summing up all the hosts that contain each different rubyversion.

I believe this could be done for every fact and produce a similar pie chart.

The also needs to be made available via json api as well.
