Pull request:			

Description

Host model has attributes ip, mac, domain, subnet and hostname delegated to primary interface for legacy reasons. We should give users some time (at least one release) to update plugins. After that period we should remove the delegations.

I'm not sure if we should delete them so quickly, as they might be used in templates, parameters with erb etc.

#3 - 01/20/2015 07:44 AM - Marek Hulán

I think we should remove assigning (ip=, mac=, ...) ASAP. Readers can live the forever. Templates should contain only readers.

#4 - 03/05/2015 10:11 AM - Daniel Lobato Garcia

Also keep in mind writers are currently used in the API. Removing them will mean handling attributes in the API differently.
