Foreman - Bug #9049

Swallowed exception message when triggering a Puppet run

Pull request:	https://github.com/theforeman/foreman/pull/2100		

Description

If an exception occurs during triggering a Puppet run from the UI, user will be notified of the error in a flash message. If the exception occurs when running the action non-interactively (e.g. from a DynFlow task), the exception will get swallowed.

The issue stands in the way of further debugging of a Staypuft issue:

Revision 86adb030 - 01/23/2015 06:46 AM - Jiri Stransky

Fixes #9049 - Log exceptions when triggering a Puppet run

If an exception occurs during triggering a Puppet run from the UI, user will be notified of the error in a flash message. If the exception occurs when running the action non-interactively (e.g. from a DynFlow task), the exception will get swallowed. This patch makes sure the exception message is at least logged to allow later inspection.

The patch is necessary to proceed with debugging of a Staypuft issue:
