This still doesn't appear to be sorting correctly. It's only sorting on the parent name, not path.	
folders.png shows what the code produces today. folder2.png shows what happens when folder.rb is changed to use <code>"#{path} / #{name}"</code>	
This is closer, but everything before "vm" should be truncated.

It seems to me that the `to_label` method we added in `app/models/concerns/fog_extensions/vsphere/folder.rb` should be calling `to_label` for the **parent** too. The parent appears to be just the label of the parent folder, not the full path - nor is it calling `parent.to_label` recursively. Probably doing that would fix it.

The change to path sort of works, but it's just a string that contains the 'vm' folder too, so not ideal.
