- Status changed from New to Feedback

Can you link to the modules you have installed? Also output if "find /etc/puppet/environments/production" would be useful.

#2 - 01/24/2015 08:32 AM - Taner Tasar

Hi Dominic,

thanks for your reply. For test purposes i had installed the puppetlabs/ntp module under production and my other environments. Below you can see the output. Unfortunately i cant see a error message under proxy.log.

It seems all is ok. I can see my environments can be found from foreman (/var/log/foreman-proxy/proxy.log) but the classes and environments will not be imported.

I touch under my environments the file environment.conf (even though the file is optionally for puppet)
I use directory environments (puppet.conf environmentpath=\$confdir/environments)

I can see with the commands
puppet config print | grep module
and
puppet config print | grep manifest

show me the right folders from my modules and manifests.

The same problem i have too in my puppetlab environment at home.
The same error and issue. With directory environments i cant get my classes.

But if i installed foreman and puppet on the same machine without directory environments but with configdir environments and a older version off puppet i can perfectly import my classe :(

I dont know what do i wrong. Gives anybody that have the same issue ?.
Maybe like me with foreman and puppet on different machines and directory environmets.

If i try use the command
puppet parser validate -> no errors are shown.

If puppet and foreman on differnt machines and with directory environments what is to consider?
My environments will be founded from foreman what i can see in the foreman-proxylogs.

Any ideas ?

Thank you for you help

Best regards
Taner Tasar

#3 - 01/24/2015 06:46 PM - Taner Tasar

Hello Guys,

after a few troubleshooting i have new messages.
I changed my foreman-proxy to only http but the solution
is the same. Issues are kept.

If i try

```
curl http://puppet-client:8000/puppet/environments
{"home","production"}
```

i see my Environments. But if i try

```
curl http://foreman:8443/puppet/environments/development/classes
[]
```

i dont receive my classes

Please consider i have foreman and puppet on different machines and directory environments.
For me its look like a Bug.

Foreman 1.7.1

Puppet 3.6.1

Best regards
Taner Tasar

[]
```

i dont receive my classes

You're requesting classes in development, but it only listed "home" and "production". Could you try <http://foreman:8443/puppet/environments/production/classes> ?

#5 - 01/26/2015 02:55 PM - Taner Tasar

Hi Dominic,

sorry my mistake (wrong copy and paste).Off course i used the link

```
curl http://puppet-client:8000/puppet/environments/production/classes  
[]
```

and i dont receive my classes. Today i installed

Ubuntu 14.04
Puppet 3.7.3
Foreman 1.7.1

and now is all good. I can import my environments and classes.
Finally i had to use newer version of puppet.
I dont understand why i didnt get my classes with puppet 3.6.1
and foreman 1.7.1.

For me is not so good that i have to use puppet version 3.7.3 because
in the repositories of ubuntu 14.04 u can only find the version
3.6.1. But i think i use the version puppet 3.7.3 further.

Thank you for your good efforts and helping Dominic and thank you
to the foreman community.

I think this Ticket can be closed.

Best regards
Taner

#6 - 01/27/2015 03:53 AM - Dominic Cleal

- Status changed from Feedback to Resolved

Puzzling, I can't think why that would be! Maybe it replaced some config files which worked better. Anyway, glad you got it working.

#7 - 11/23/2016 07:26 AM - Slagian Momirovici

- Related to Support #17462: failed to import classes added
