Description

Hello,
I try to configure puppet + foreman. Foreman untar into foreman-nightly.tar.bz2 (25.11.2009). Puppet and foreman run on same host.
My puppet site contain only one Class - "test_class" - and one node. I do the folowing:
1. Run puppetmasterd with config (see attach);
2. cd /var/rails/foreman
3. Run RAILS_ENV=production rake db:migrate
4. Run RAILS_ENV=production rake puppet:import:puppet_classes --trace
(in /var/rails/foreman)

- Invoke puppet:import:puppet_classes (first_time)
- Invoke environment (first_time)
- Execute environment
- Execute puppet:import:puppet_classes
  Environment   old:1   current:1
  PuppetClasses old:0   current:0

Export node into foreman works

Best wishes, Nikolay

- Status changed from New to Feedback

I assume that you are not using modules, I will update the documentation that only when using modules you can import classes.

(other wise there is no relationship to an environment - and thats the right way to do it anyway).

- Assignee changed from Ohad Levy to Nikolay Aralovets

#3 - 11/26/2009 11:32 AM - Nikolay Aralovets

Yes, I not use modules :(
I will try to create the module and to execute export
Thanks for the help
