Foreman - Bug #9108

It's not possible to overwrite a default value of a parameter inherited from parent host group in nested host group

01/26/2015 07:18 AM - Filip Brychta

Status:	Closed		
Priority:	Normal		
Assignee:	Tom Caspy		
Category:	Host groups		
Target version:	1.9.1		
Difficulty:		**Fixed in Releases:**	
Triaged:		**Found in Releases:**	1.7.1
Bugzilla link:	1295179	**Red Hat JIRA:**	
Pull request:	https://github.com/theforeman/foreman/pull/2128		

Description

1 - create a new host group named 'parent' with global parameter named 'parameter1' with value 'parentValue'
2 - create a new host group named 'child' and set Parent to host group created in step 1. and change value of 'parameter1' to 'changed'

Result:
Value of 'parameter1' in 'child' host group is still 'parentValue'
Value of 'parameter1' in 'child' host group is editable but no change is applied.

this is indeed a bug.
Current workaround - the value can be overridden by adding a new global parameter with the same name, and overriding the value there.

Note that this workaround (duplicate parameters in the hostgroup) will lead to #8366

#3 - 02/03/2015 10:09 AM - Tom Caspy

checked... didn't break anything... apparently the bug is that the shown parameter isn't actually something which exists in the DB, I'll investigate further as to why this happens.
