Foreman - Bug #9189

Organization doesn't take into consideration parents from nested names

Description

For hostgroup, in case of a nested hostgroup, the name is: hostgroup: Role/base

For organization, this is not the same. For nested organization names (Others/user), the exported name is only "user". This is not consistent with the hostgroup. Also I think it may lead to problems with hiera in case there is an organization "user" and one named "Others/user" (didn't test it).

History

#1 - 02/05/2015 04:18 AM - Dominic Cleal

- Project changed from Plugins to Foreman

- Category set to Organizations and Locations

I take it you mean in the ENC YAML output?

#2 - 02/05/2015 04:44 AM - cristian falcas

Yes.
