

## Foreman - Bug #9190

### OS Distribution statistic produces invalid search queries

<b>Description</b>	
<p>Regardless of whether Orgs/Locs are enabled, in release 1.7.2 and prior, the OS Distribution graphic's clickable slices at times produce invalid search queries producing an empty search result.</p> <p>Cases I have discovered seem to all be where the length of the label string is shorted with ellipses.</p> <p>Examples: os_title="SUSE Linux En..." os_title="Solaris 5.10 ..." os_title="Oracle Linux ..."</p> <p>In addition, the graphic itself often produces multiple slices that appear to be identical due to the shortening that produces the problematic searches. I run Multiple versions of Oracle Linux 5 and 6 as the primary OS in my environment (111/180 systems). The OS Distribution Graphic shows four different slices all producing the same os_title="Oracle Linux ..." search query, leave me unable to identify which version the slice refers to.</p> <p>Screen Shots of the Oracle Linux problem case are provided.</p>

- Status changed from New to Resolved

I can no longer reproduce this on latest versions, the statistics page has been rewritten in 1.14.

Please re-open if you can reproduce - thanks!
