Description

Hi,

I would like to see some custom graphs and a whole new tab called "Trends" that display information about facts over time. For example:

I want a graph that shows my upgrade progress of RHEL4 --> RHEL5 or any other fact I choose. I think this historical data should be kept in an RRD like fashion. However it could also be kept in the database.

The user should be able to choose which facts they want to keep historical data for and ultimately use for trend analysis.

This type of trend reporting is common in most snmp monitoring utilities, but trend analysis on facts is something completely different.

This type of data would be able to answer questions like: How long did it take you to adopt RHEL5. How long did your did it take you to remove your last i386 system.
