**Description**

#6371 added a hidden view of the password to the VNC page, but not to the SPICE console page.

Might be worth improving the formatting at the same time so it's not shown above the status/header line, but below.

## History

**#1 - 02/11/2015 04:01 AM - Dominic Cleal**

*- Related to Bug #6371: no normal way to get VNC password for guests being provisioned on libvirt compute resource added*

**#2 - 02/11/2015 04:05 AM - Dominic Cleal**

It's also displayed when there is no password set, but could either be left out or print different text to make it clear the password's unset.
