

Foreman - Bug #9352

Regression of API host creation bug #7989

02/12/2015 07:51 AM - Emil Flink

Status: New	
Priority: Normal	
Assignee:	
Category: API	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases: 1.7.2
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
After upgrading from 1.6.x to 1.7.2 I am facing the exact same issue as described in bug #7989 .	
Trying to create a host returns error: "operatingsystem_id is not allowed as nested parameter for hosts. Allowed parameters are hostgroup_id, location_id, organization_id, environment_id"	
If any further information is helpful please let me know.	

History

Sorry, apparently my POST request was actually incorrect but correct enough to pass in old versions of Foreman.

I sent my data as: { key: value, key2: value }

When I should have sent: {'host': { key: value, key2: value } }
