

Foreman - Feature #9561

[RFE] Write structured logs to journald

02/26/2015 06:09 AM - Duncan Innes

Pull request:	
Description Redirecting all application logs to syslog/journald will simplify life for Sys Admins. Providing structured key:value pair fields to journald would elevate this functionality further. Apache HTTP Server 2.5 recently added this kind of capability: http://httpd.apache.org/docs/trunk/mod/mod_journald.html For complex estates with a central Foreman server and multiple smart proxies dotted around the network, it is a huge benefit to be able to pull all log files back to a central point. This would be made very much easier by the relevant applications writing their log files directly to journald. (blatant copy of Katello ticket: http://projects.theforeman.org/issues/9560 but I wanted to make sure that both sides of the Foreman/Katello coin were covered)

- Status changed from New to Duplicate

Hello, we already track this effort, but since we still fully support RHEL 6 systems, we don't rush with this.

#3 - 02/26/2015 10:32 AM - Duncan Innes

Could it not be optional in the installer?
(P.S. I **did** search for "journald" tickets - honest!)

#4 - 03/02/2015 04:17 AM - Lukas Zapletal

Hey, I don't think we will be introducing option for this, systemd is the preferred way and it is feature rich.

No problem, it happens :-)
