

Discovery - Bug #9597

FK violation when trying to delete a discovered host after provision

03/01/2015 11:04 AM - Ori Rabin

Status:	Closed	Fixed in Releases: Found in Releases: Red Hat JIRA:
Priority:	Normal	
Assignee:	Ori Rabin	
Category:	Discovery plugin	
Target version:	Discovery Plugin 2.0.1	
Difficulty:		
Triaged:		
Bugzilla link:	1197477	
Pull request:	https://github.com/foreman/foreman_discovery/pull/166	
Description		
<p>When provision on a discovered host fails there is a token created that is not deleted. Provisioning the same host again will create a new token for that host. Trying to delete the host after provision deletes only the second token, to avoid leaving an orphaned token the delete fails with a FK violation error</p> <p>Steps to reproduce:</p> <ol style="list-style-type: none">1. discover a host2. try to provision that host but don't put anything in the host edit form3. save4. fill in correct values to provision the host5. save6. try to delete the new managed host that was created <p>expected result: host is deleted</p> <p>actual result: an error:</p> <p>ERROR: update or delete on table "hosts" violates foreign key constraint "tokens_host_id_fk" on table "tokens"</p>

I can only reproduce on a new DB, once I delete the token table I can't anymore.

#4 - 03/02/2015 09:26 AM - Ori Rabin

- Target version set to Discovery Plugin 2.0.1

#5 - 03/02/2015 02:04 PM - Stefan Lasiewski

I've been testing the Discovery Plugin casually since 2.0.0-rc1, and it would be hard for me to pin down any specific steps that led to this.

In my particular case, we've been using The Foreman on an off since release 1.4. I have upgraded from 1.4 to 1.5, 1.6 and 1.7 over time. I started experimenting with the Discovery Plugin 2.0.0-rc1 soon after it came out and I have used it to discover a dozen physical hosts. I then upgraded to 2.0.0-rc2 and 2.0.0-1 soon after they were released.

I am attempting to provision 3 of these hosts. With two of the hosts, I cannot delete the host. Here's an example using the hammer CLI:

```
stefanl@puppet:~ $ hammer -d host delete --id 83

#6 - 03/02/2015 02:25 PM - Stefan Lasiewski

And I don't really know rake at all, but I did follow some debugging advice from an earlier ticket (Bug 1109258) and I poked around on the rake console a bit. I'm not sure how helpful this could be, but I thought I would include it anyways.

```
[root@puppet ~]# foreman-rake console
```

```

#7 - 03/05/2015 04:45 AM - Ori Rabin

- Pull request https://github.com/foreman/foreman_discovery/pull/166 added
- Pull request deleted (https://github.com/foreman/foreman_discovery/pull/163)

#8 - 03/06/2015 09:10 PM - Stefan Lasiewski

This bug may also affect provisioning. I noticed that when I'm attempting to re-provision a server, it does not modify the file at `/var/lib/tftpboot/pxelinux.cfg/01-00-33-44-55-66-77`

As a workaround, I discovered that I can rename the host from something like 'webhost.example.org' to 'webhost-bad.example.org', assign a bogus MAC address to the primary interface, like 11:22:33:44:55:66 and delete any extra interfaces. The host is still in the list, with "host_id" = 82 but I can ignore it for now and delete it at some future point
